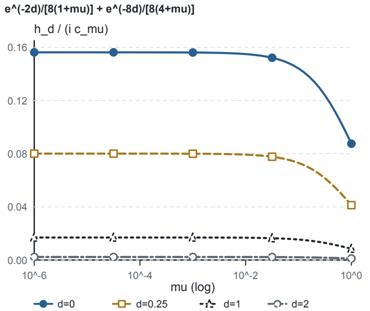
R0.73A | hidden mean, transient envelope, and frozen projection screen

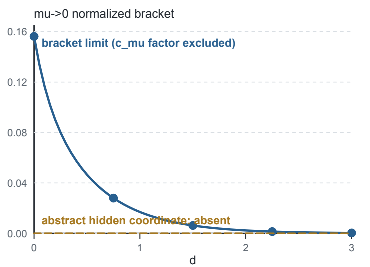
Exact formulas plus a validated finite Galerkin audit; no PDE simulation or fitted curve

A Normalized hidden-mean bracket

h_d/(i c_mu); path-sensitive interpretation

BRACKET mu->0: NONZERO IF c_mu->c0 != 0





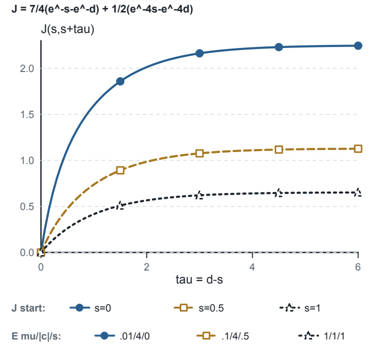
ABSTRACT TANGENT: NO HIDDEN COORDINATE
FIXED Lambda (c_mu->0): UNDECIDED

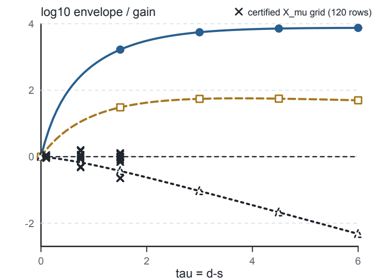
Nonzero h_d limit requires c_mu->c0 != 0 (Lambda_mu ~ 1/gamma).

B Transient envelope

Exact J kernel and declared analytic upper bounds

ANALYTIC UPPER ENVELOPE - NOT OBSERVED GAIN





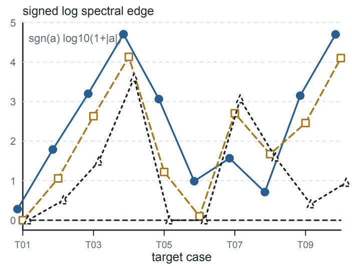
CERTIFIED X_mu GAIN: OVERLAY PRESENT
FORMAL LINEAGE SEALED; CERTIFICATE COMMIT BOUND

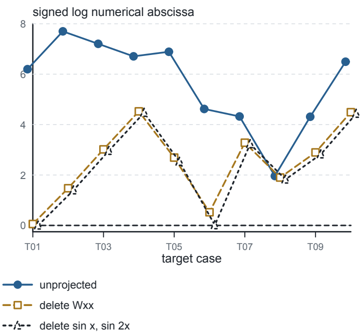
Formal analytic bound sealed; maximum observed gain remains unclaimed.

C Frozen projection screen

Three matrix variants across ten low-gap target cases

FINITE GALERKIN N=40 - NOT INFINITE-DIMENSIONAL





FIXED PROJECTION SUFFICIENT: FALSE IN SCREEN
NO GALERKIN TAIL BOUND

Counterexample screen only; not an infinite-dimensional theorem.
