

Every Picard order closes on one periodic target coefficient

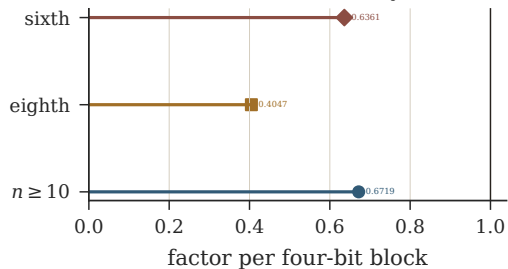

quartic-critical amplitude · complete invariant-shear series · $M_r = 16^r$ · source-locked R0.69A certificate

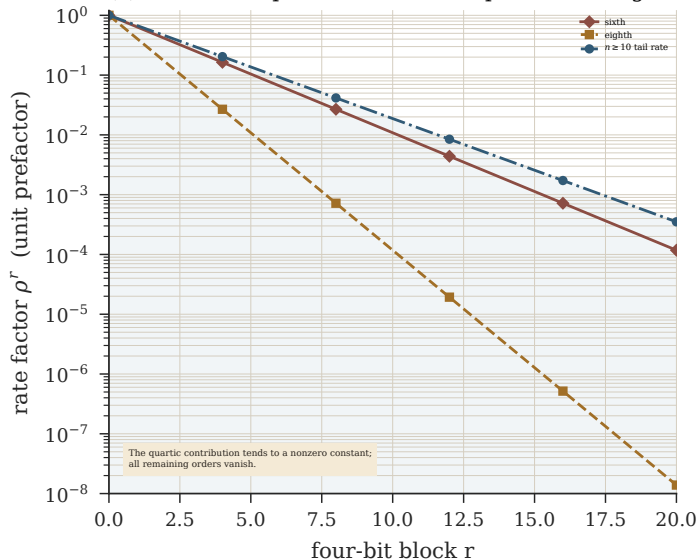

(a) Surviving nonlinear correction

(b) Certified one-block decay

(c) Rate envelopes vanish after amplitude scaling

Claim boundary: one target coefficient in a globally smooth invariant-shear class; arbitrary 3D transverse perturbations and singularity criteria remain open.
