

Paid-branch deletion leaves one residual best-N gate

R0.74S STEP 10 | SIX CLASSES | SINGLE LEDGERS | S.243 OPEN | NOT CLAY

A Four paid classes

P_beta + P_Q
one combined 6 B_Q

SINGLE

P_sigma + P_LE
one combined C5 ledger

SINGLE

D-first six-class split
no low-Rayleigh residual

EXACT

No duplicate Q ledger;
no duplicate cubic ledger.

B Two residual mechanisms

R_sh: short non-D
and Q-small

RESIDUAL

R_x: defect or
high-Rayleigh ancestry

RESIDUAL

$T/6 < r < T/2$
on both classes

SHARP

One shared exception budget;
two separate N budgets are false.

C Shared best-N gate

clock tail $\leq$ paid
+ 6 residual best-N tail

REDUCED

residual tail $\leq$
one half clock tail

DOMAIN-SAFE

fixed universal NO
residual estimate S.243

OPEN

Plateau is weaker than full Q.12.
PDE packing is not proved.
Prior no-go remains.
NOT CLAY.
