

# R0.73K Parameter-uniform viscous branch

Largest-cutoff branch, first-order drift, projector conditioning, and cutoff closure

**FINITE-DIMENSIONAL DIAGNOSTIC / NOT CONTINUUM PROOF**

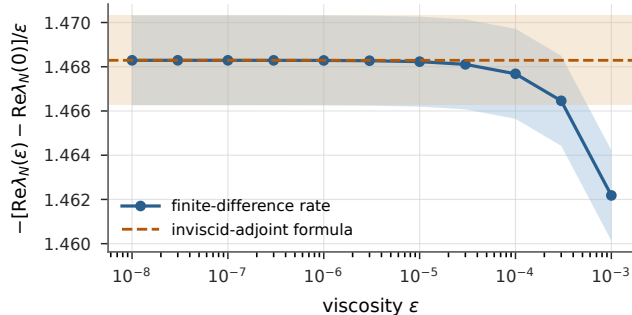

## A Selected eigenvalue across $d$

$N = 160$ ; 17 nodes; focused vertical scale

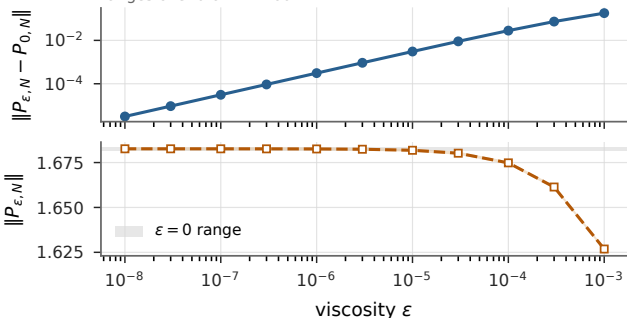

## B First-order viscous drift

bands span all 17  $d$  nodes at  $N = 160$

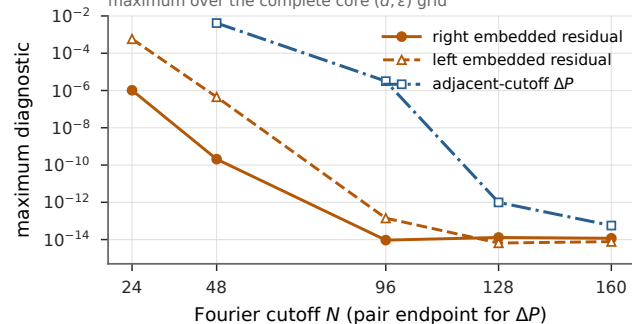

## C Projector difference and conditioning

ranges over  $d$  at  $N = 160$

## D Cutoff closure

maximum over the complete core ( $d, \epsilon$ ) grid

Source: sealed R0.73K finite Fourier diagnostic + independent coefficient-level recomputation. Bands are sampled ranges, not rigorous continuum intervals.
