

R0.74A | Localized K_D payments and obstruction ledgers

Closed exponent factors from the proved size lemma and two function-level examples.

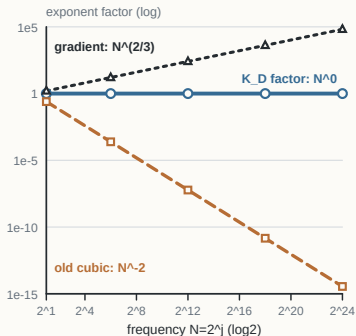

A Four-block scale weights

$A_c=B_c=U_{\text{ext}}=D_{\text{ext}}=1$; C suppressed, not plotted

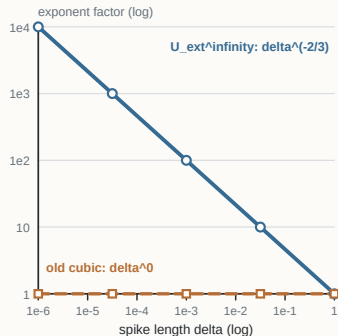

B Exterior frequency packet

$N=2^j$; $\epsilon_N=N^{(-2/3)}$; c suppressed, not plotted

C Exterior time spike

each delta is separate; no uniform global $\text{Lin}_t L2_x$

Function-level packets, not unforced NSE trajectories • no simulation/DNS • finite rows do not prove quantifiers
