

R0.73M finite prescribed-action recoding diagnostic

15 finite cases · $N = 40, 48, 64$ · $6.25 \times 10^{-5} \leq \varepsilon \leq 10^{-3}$ · focused scales declared

(a) Finite action-normalized gain

(b) Second- and third-order recoding

(c) Signed cubic path alignment

(d) Numerical gate-family maxima
