

R0.74j exact fifth-shell payment law

38/38 finite gates; analytic heat lower bound plus a nonnegative-row payment ledger.

A Exact fifth-shell geometry

ANALYTIC + FINITE

$|x_1|, |x_2| < R$ (schematic thickness)

$|Q_R| = 64 R^3$

$9218 < 128^2$; margin = 7166

$\text{dist}_T(x_3, P_R^c) \geq 48R$

$P(\text{exit}) \leq 65/1152$

$\theta \geq 511/576 > 1/2$

ledger: $(2R)^{-2} \cdot |I_{\mathbb{R}}(2R)| \cdot |Q_R| \cdot (1/2)^3$

$= (1/4) \cdot 4 \cdot 64 \cdot (1/8) \cdot R^3 = 8 R^3$

annular weight: $\Gamma_5 = e^{-8}$

B Matching complete payment

PROVED FOR FAMILY

1 positive heat platform

$\theta \geq 1/2$ on $I_{\mathbb{R}}(2R) \times Q_R$

2 cubic payment row

$G_u \geq 8 e^{-8} B^3 R^3$

3 complete nonnegative payment

$8 e^{-8} B_j^3 R_j^3 \leq P_j \leq C B_j^3 R_j^3$

4 exact family rate

$\log(P_j)/L_j^2 \rightarrow 3/320$

R0.74j exact rate

also: $\log(P_{j+1})/P_j = (9/320)L_j^2 + O(1)$

sqrt-log endpoint upper remains OPEN
