

R0.710 / soft denominator layers and one-sided face measures

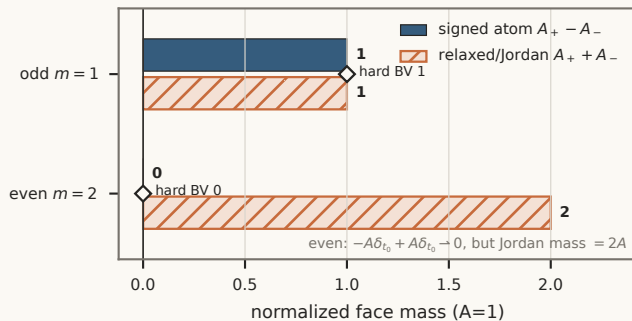

Exact finite-order profiles - abstract budget separation - one genuine NSE initial jet

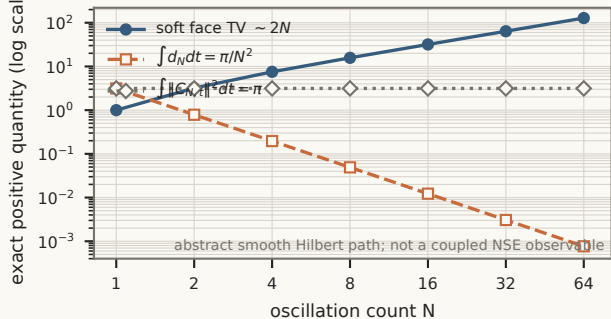

A Odd and even finite-order soft profiles

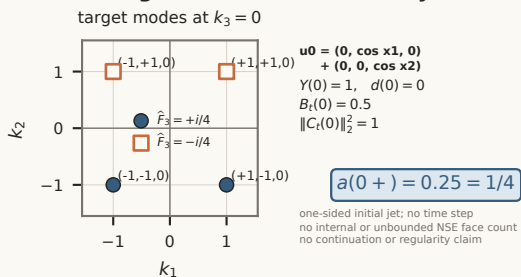

B Signed atom versus relaxed face cost

C Oscillatory separation at $\epsilon_N = N^{-4}$

D One genuine NSE initial entry face

Scope: fixed cell and $Y > 0$. Panel C is abstract. Panel D is one NSE initial jet only; no internal face-count, continuation, singularity, or regularity theorem.
