

R0.73H HARMONIC FEEDBACK

Exact $q=2$ continuum subcertificate beside finite binary64 response and QA diagnostics

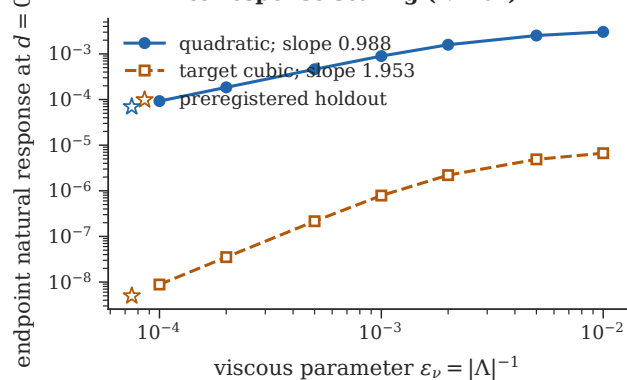

A Exact doubled-row energy subcertificate

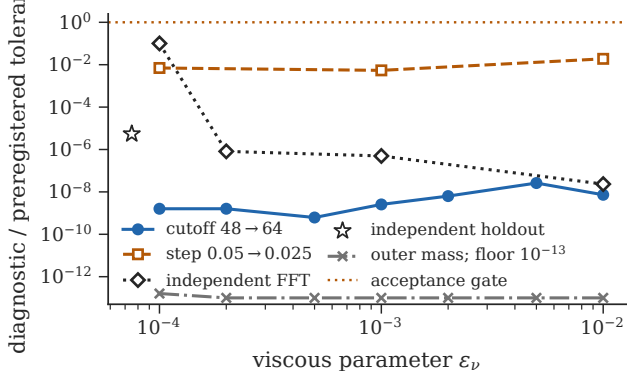

C Finite compensated coefficients

B Finite response scaling ($N = 64$)

D Finite numerical checks

A: exact subcertificate. B--D: finite $d = 0.01 > 1/450$ diagnostics; not theorem $d = D$; no continuum saturation or tail bound.
