

Strict derivative and dominant-mass components of the eighth-order heat sign budget

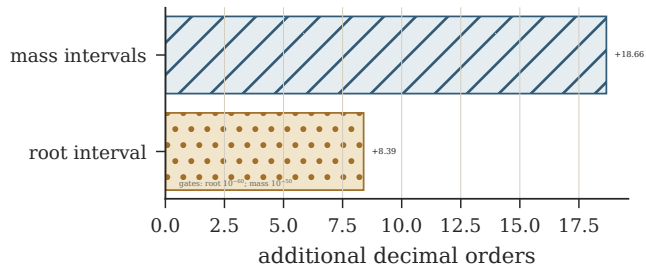

35 shuffles · all 4,368 eleventh-order multiindices · 1,792 exact mass intervals · combined sign still open

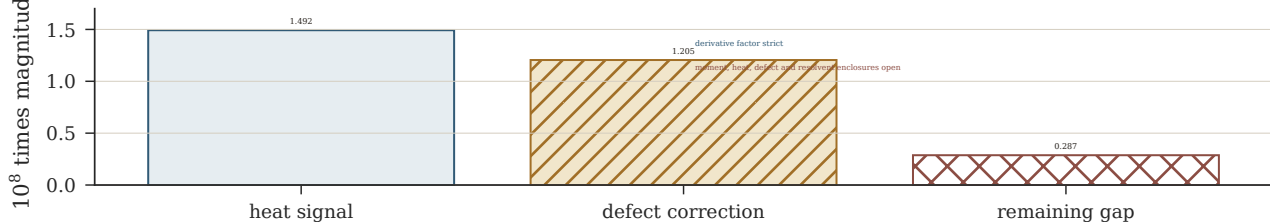

(a) Exact eleventh-derivative upper bounds

(b) Certified precision beyond declared gates

(c) Degree-ten sign budget remains a mixed-evidence pilot

Claim boundary: panels (a) and (b) are exact rational certificates. Panel (c) is diagnostic; its positive gap is not yet a strict sign theorem.
