

R0.74G complete-payment ledger

31/31 exact gates + normalized analytic envelopes; formula evaluation, not flow simulation.

A Exact payment exponent ladder

31/31 EXACT

Full scale

c_{gamma} 8/3969

Enlarged close range

$3c_{\text{gamma}}/2 = 4/1323$

$c_R = 1/320$

$a_{\text{plateau}} = 49/14625$

$c_R - 3c_{\text{gamma}}/2 = 43/423360$

$d_E - c_{\text{gamma}} = 17018/12998475$

$a_{\text{plateau}} - c_R = 211/936000$

B Normalized analytic ledger

ANALYTIC DERIVATION

$g=43/423360 > 0$; $L_{12}=8064$; $L_{13}=16128$; cells report $\log_{10}(\text{factor})$

quantity	exact analytic formula	j=12	j=13	limit
background floor	$\bigcirc$ 1	0.000	0.000	-> 1
packet G	$\bullet$ $\exp(-g L^2) L^{-2}$	-2876.24	-11482.13	-> 0
packet H	$\square$ $\exp(-g L^2) L^{-7/2}$	-2882.10	-11488.44	-> 0
ratio lower	$\blacklozenge$ L	+3.9066	+4.2076	-> +inf

Exact formulas, deterministic evaluation; envelope/lower-bound directions are not DNS.
