

Common-response packing and signed output

closed exact formulas · lacunary finite-mode families · R0.71A sign pair

FINITE-MODE PACKING OBSTRUCTIONS + ONE CONDITIONAL CONSUMER / NOT A CONTINUATION OR REGULARITY RESULT

A-C use arbitrary- N closed families; the producer exhaustively audits resonance support at $N=8$. D is the exact one-output R0.71A pair.

Scope: two packing no-go examples and an exact Cauchy-Young consumer coefficient; no Navier-Stokes propagation bound is proved.
