

A reachable zero-time sixth-order mode exceeds the conditional $C^{1,1}$ scale

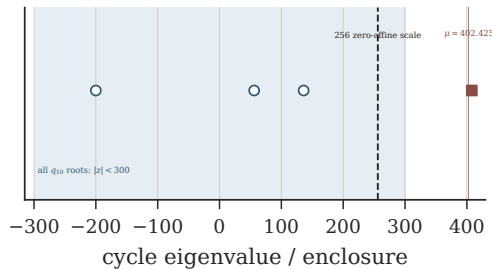

Exact 320-state transfer · $Y_r = C_{6,0}\mu^r + O(300^r)$ · $\mu > 400 > 300 > 256$

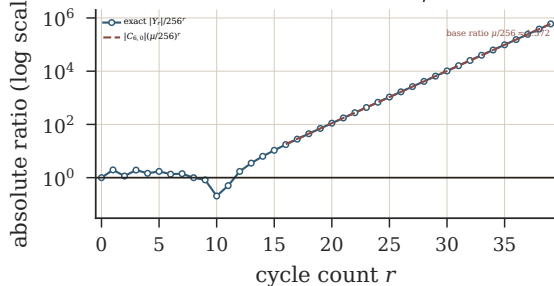

(a) Exact reachable target after division by μ^r

(b) Exact spectral separation

(c) Exact growth relative to $M_r^2 = 256^r$

Claim boundary: zero-time fixed-order correlation only; the complete five-simplex heat projection and full mild solution are not certified.
