

R0.730 | finite Kolmogorov spectrum diagnostic

Exact cube embedding: $N = 10$, $m = 7$, $\alpha = 0.7$, $R = 3.012$; published interval certificate remains the theorem-level input

FINITE / ILLUSTRATIVE: the blue computation independently reproduces the sign and scaling; the gold critical interval is imported from the computer-assisted proof.

This figure does not certify the infinite-dimensional spectrum, nonlinear escape, a 3D mode, singularity, turbulence, or the Clay conclusion.
