

Terminal-window contraction and the arbitrary-clock gate

R0.74R analytic route | no simulation or DNS | NOT CLAY

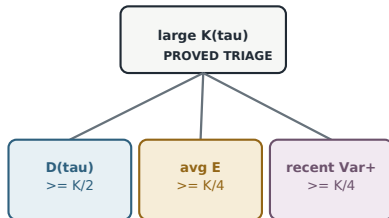

A Terminal window

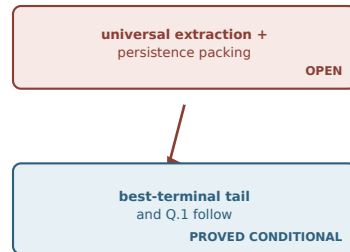

Bounded payment forbids broad terminal-window target mass.

B Arbitrary completed clock

At least one branch occurs.
Only the kinetic branch directly supplies the needed time window.

C Exact remaining gate

NO-GO: scalar positivity,
thin-time, and pure functional
shortcuts are excluded.

Witnesses are NOT NSE solutions.
