

Low-Rayleigh dissipation supplies parabolic kinetic mass

R0.74S Step 7 | LOW-RAYLEIGH BRANCH PAID | RESIDUALS OPEN | NOT CLAY

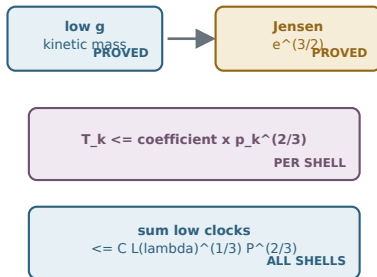

A Exact dissipation trichotomy

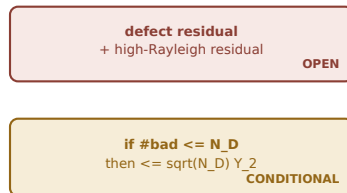

The priority split is disjoint and exhaustive for every shell.

B Low-Rayleigh payment

No uniform time-thickness hypothesis is used.

C Residual boundary

Exact shear: high-Rayleigh time set exists, but $K = Q$ and is already Q-paid.

No Q.1 or regularity claim.
The Step 6 scalar no-go retains its narrow scope.

NOT CLAY.
