

# Finite diagnostics for the R0.72E supercritical ledger

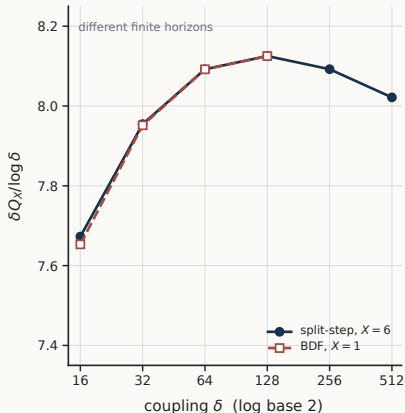

fixed  $q_0 = 4$  · deterministic binary64 certificates · finite audit, not proof

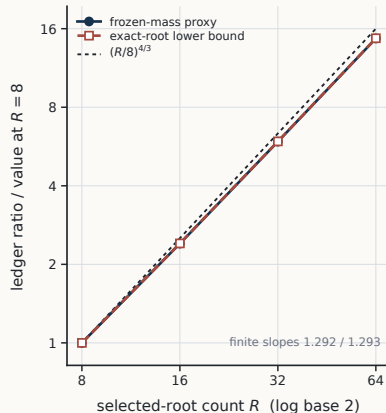

## A Bessel mass coefficient

## B Negative-Sobolev action

## C Ledger lower-bound growth

Finite audits only: selected roots give a complete-ledger lower-bound mechanism; bounded  $\text{Lambda}_1$  is omitted. No regularity or Millennium claim.

R0.72E-1
