

An exact affine lift separates the dominant root from the $C^{1,1}$ remainder

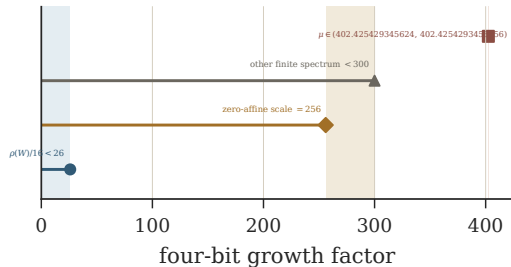

320 states · 1600 finite moments · $26 < 256 < 300 < \mu$ · all 13 certificate checks pass

(a) Independent direct-convolution checks

Claim boundary: the affine lift and resolvent are certified; the complete heat-kernel projection sign is not.

(b) Certified scale separation

(c) Exact block-triangular affine lift

	m	ℓ_A	ℓ_B	ℓ_C	ℓ_D
m	W	0	0	0	0
ℓ_A	$E_A/16$	W/16	0	0	0
ℓ_B	$E_B/16$	0	W/16	0	0
ℓ_C	$E_C/16$	0	0	W/16	0
ℓ_D	$E_D/16$	0	0	0	W/16

$M(P) = LM$ and $M(P) - JL = 0$
