

Signed production across the heat scale

A Heat-plane endpoint payment

$s + vt = c$, $s'(t) = -v$ (drawing coordinates: $v = 1$)

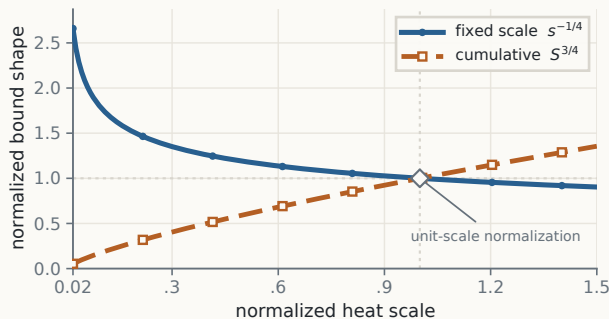

R0.73W · exact identities and finite witness

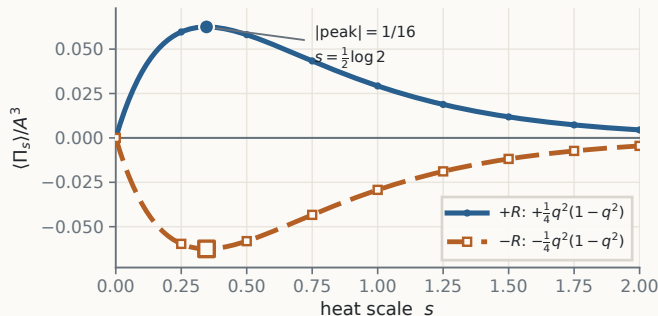

B Energy-class scale envelopes

ANALYTIC BOUNDS · UNIT-SCALE NORMALIZED · NOT DATA

C Exact rank-three sign pair

$u_A = \pm AR$, $q = e^{-s}$ · two-path finite certificate

D Dimensionless absorption coefficient

$c_{\text{abs}} = q^2 / [2(13 + 12q^2 + 10q^4 + 4q^6)]$ · exact, not fit
