

The eighth-order zero-time cycle has a 148-dimensional stable image and one reachable dominant root

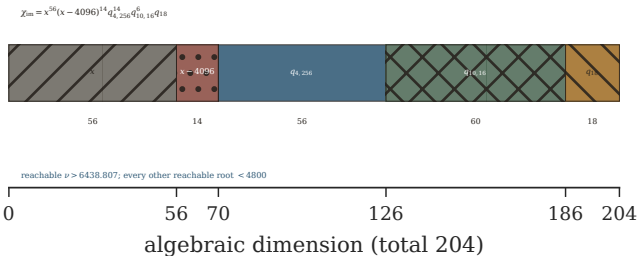

exact 1792-state transfer · four-bit cycle 0100 · $Y_{8,r} = C_{8,0}v^r + O(4800^r)$ · heat simplex still open

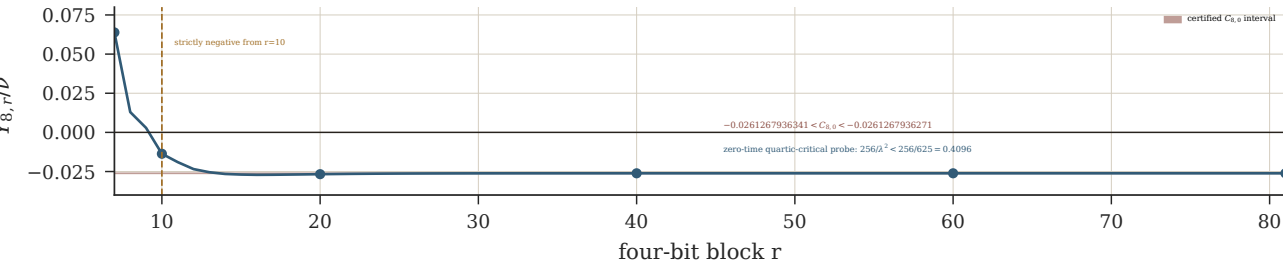

(a) Exact rank collapse

(b) Exact characteristic factorization on $\text{im}(W_8)$

(c) The reachable scalar crosses sign and converges to a strictly negative projection

Claim boundary: exact zero-time fixed-order spectrum only; the complete seven-simplex heat projection and general 3D regularity remain open.
