

R0.74S Step 13: temporal and packing thresholds

ANALYTIC SCHEMATIC | EXACT FORMULAS | NOT SIMULATION OR DNS | OPEN GATES RETAINED | NOT CLAY

A Temporal-integrability ceiling

B Two exact packing thresholds

Moving-Morrey cap

$\theta \leq 2/3$
closes S.329

CONDITIONAL

$\theta > 2/3$

equal-coordinate tail
outgrows $P^{(2/3)}$

ABSTRACT

threshold = $2/3$ for the two-scalar-cap inference

Child coefficient cube

$\sum c_{\text{child}}^3$
 $\leq \theta_{\text{d}} c_{\text{parent}}^3$

INTERFACE

Eight children $\times 1/2$

$8(1/2)^3 = 1$
Dini constant grows

CRITICAL TREE

uniform Dini: $\sup_d \sum_n \prod_j \theta_{(d_0+j)} < \infty$

strict cubic decay is sufficient; critical equality is not
