

Global certification of the affine family $c^s(1 + \lambda|s|)$

(a) Eliminated margin around the global candidate

(b) Exact Krawczyk contraction

(c) All 242 inactive all-order sector gaps on the root box

Display: 80 exact rational feasibility samples, three exact Krawczyk inclusions, and all 242 inactive gaps. Proof: GMP Krawczyk/KKT, Descartes 3/3 roots, and 317 negative Bernstein coefficients.

Scope: complete $c > 0, \lambda \geq 0$ affine family in the reduced degree-80 edge system; global radius gap 10^{-40} . No exact-real maximizer uniqueness and no three-dimensional Navier-Stokes regularity claim.

Source: R0.52 exact certificate · 22/22 checks · 242 inactive sectors · monitored 242.4 s · no floating-point sign decision
