

Mixed-parity cubic audit: graph obstruction and physical scaling

$S_R = \{R, \dots, 3R-1\}$ | $\delta = 0.05R$ | one complex root | producer + independent

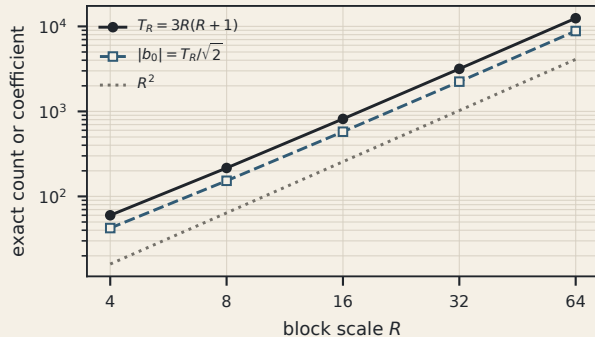

A Gcd-reduced carrier graph

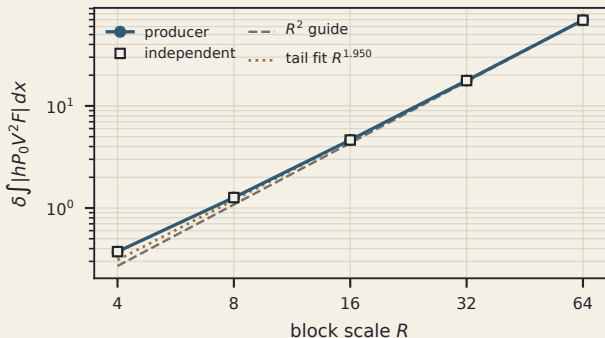

bipartite $\iff$ every $r/\gcd(S)$ is odd

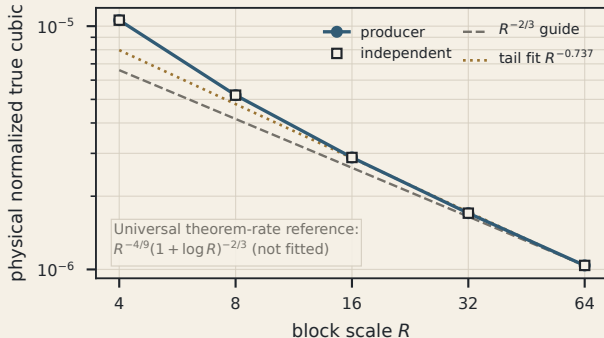

B Exact triangle coefficient

C True raw cubic is order R^2

D Physical normalization still decays

Finite mixed-parity block | one complex root | no complete-root or general 3D claim.
