

R0.71M / exact increment commutator and the four-row tangent boundary

Exact identities - deterministic Fourier audit - analytic heat-packet scaling - no DNS

A Exact pairing split on one smooth witness

B Direct estimate produces four split rows

C Energy does not universally pay these envelopes

D Direct-route ledger and the R0.71N gate

Scope: fixed cells and a direct absolute envelope. No face, moving-cell, Leray-limit, continuation, regularity, or singularity claim.
