

Universal no-exception stopped-work quadratic bound: refuted

R0.74S Step 8 | EXACT NSE NO-GO | CONDITIONAL S.38 RETAINED | NOT CLAY

A Total-Rayleigh excess bridge

beta
 $\geq T / 6$
PAID

sigma
 $> T / (12I)$
PAID

x
 $> T / 6$
LEFT

$0 \leq x \leq X$
sum $X \leq$ total dissipation
FINITE

$x_k \leq [F_k]_+$
sum $x \leq W_{up} \leq C P$
PROVED

Selected class: $F > 5K / 6$
and $K < (6/5) F$.

B B_Q-precision equivalence

$B_Q = \sum TV(Q_k)$
 $\leq C_Q P^{(2/3)}$
PAID

$|W_{up} - C_{full}| \leq B_Q$
SHARP

$K_{full} - B_Q \leq W_{up}$
 $W_{up} \leq K_{full} + B_Q$
PROVED

No-exception stopped work is
the full terminal positive flux
modulo an already-paid row.

C Exact NSE no-go

smooth exact NSE family
 $W_{up} / P^{(2/3)} \rightarrow \text{infinity}$
REFUTED

universal antecedent: false
conditional S.38: retained
NO-GO

NEXT: fixed best-N exceptions
+ $\sqrt{N}$ Y_2 payment
OPEN

Smooth, periodic, mean-zero,
unforced and pressure-free.
No regularity conclusion.
NOT CLAY.
