

R0.74H collar-flux repair

25/25 exact compatibility gates + analytic lower-scale diagram; no unknown constants plotted.

A Energy ledger and two-regime closure

25/25 EXACT

quadratic cutoff

$$Q_R \leq C P_0^{(2/3)}$$

positive collar flux

$$C_R = \sup [F_R(t)]_+$$

signed-flux closure

$$X_R^\alpha \leq C [P_R^{(2/3)} + C_R^\alpha]$$

$$P_{\text{hat}} = P + C_R^{(3/2)}$$

$$X_R^\alpha \leq C P_{\text{hat}}^{(2/3)}$$

SMALL $0 \leq P \leq 1$

$$P \leq P^{(2/3)} \rightarrow X \leq C P^{(2/3)}$$

LARGE $P \geq 1$

$$X \leq C [P^{(2/3)} + P]$$

Version F: $(j_{\text{acc}}^{(3/2)})^{(2/3)} = j_{\text{acc}}$; no second enlargement.

B Explicit-family L-exponent comparison

EXACT EXPONENT DIAGRAM

Rows divided by $B^2 R^2$; coefficients suppressed; lower-bound directions retained.

TWO-REGIME SIZE CLOSURE
