

Local persistence/payment dichotomy

R0.75A | exact moving-cutoff alternative | W-remote witness proved | complete clock open

A Moving strip and nested endpoint core

C Hölder, weight, endpoint substitution

PERSISTENT + CRITICAL + ARBITRARILY SHORTER SMOOTH FOCUSING

B Exhaustive local-energy alternative

D Proved boundary and next proposition

FAIL-CLOSED CLAIM HIERARCHY	
PROVED	moving-cutoff identity local dichotomy W-remote endpoint/payment
EXACT	horizontal modal energy and forward decay
OPEN	complete K fixed deletion arbitrary suitable weak solutions regularity / singularity
NEXT A.63	remote complete-clock extraction control every endpoint and accumulated row

local witness lower bound is not a whole-clock upper bound
