

R0.73N | finite strain and marked-basepoint exponent bracket

Exact heat-shear formulas; high-precision endpoint audit; no PDE solve and no sharp-modulus claim

A Exact strain envelope

B Finite cumulative strain

C Marked-basepoint bracket

FINITE / ILLUSTRATIVE: exact-formula evaluations at different marked basepoints; not a sharp flow-map modulus or arbitrary fixed-background instability.

The action interval is inherited from sealed R0.73M analysis. Arbitrary fixed-background instability, full 3D FPS H3-L2, singularity, and Clay claims remain open.
