

Cross-channel recombination localizes the remaining l1 debt

R0.74S Step 6 | ABSTRACT SCALAR NO-GO ONLY | NOT PDE/NSE | NOT CLAY

A Full signed recombination

same quantity is reconstructed
no smaller control appears
CIRCULAR

The four-channel identity is exact,
but the linear route closes on itself.

B Mismatch separated

terminal = block roots
+ all shell residual l1 mass
EXACT

Temporal debts cancel; the final
nonnegative l1 ledger remains.

C One-block saturation

work = N **L1**

matched square = $\sqrt{N}$ **L2**

components = 1
epochs = 1
mergers = 0

ABSTRACT SCALAR NO-GO ONLY.
Unweighted genealogy counts
cannot pay the work.

NOT PDE/NSE. NOT CLAY.
