

A exact disjoint index partition

$l_j = l_- + l_+ \cdot$ no missing or overlapping row

INWARD UNION
 $1 \leq k \leq j-1$

TARGET
 $k = j$

OUTER TAIL
 $k \geq j+1$

B combined inward chord + expulsion

$0 \leq Dbar_- \leq C \sum 2^k \Gamma_k < \infty$
supp $Dbar_-$ lies in one r_- tube
 $r_- = (32L/63 + 1/8)R$
no shell or packet cancellation

R0.74M expulsion in the same tube
good: $R^3 \exp[-\Sigma L^2/(1056 R^2)]$

bad: $C R^4 \exp(-L^2/16)$
reserve 72851/1270080 > 0

$|l_-| \leq C \Gamma_j L R^5$

C target shell

R0.74L absolute
true-packet estimate
both radial faces

$|l_-| \leq \Gamma_j C L R^5$

inherited • independently audited

D super-Gaussian outer tail

ordinal shell symbols
not quantitative data

$|j_j k| \leq C \Gamma_k 4^k R^4$
 $\sum_{k \geq j+1} 4^k \Gamma_k$
 $\leq 2(4^{j+1}) \Gamma_{j+1}$
ratio $\leq 1/2$ eventually

$3 c_{\Gamma} - \rho$
 $= 1237/423360 > 0$

$|l_+| \leq C \Gamma_j L R^5$
